PREFACE

It is my pleasure to introduce you to the 2019 Annual Agricultural Statistics Bulletin issued by the Directorate of Planning and Business Development (DPBD) of the Ministry of Agriculture, Water and Land Reform (MAWLR) outlining the performance of the agriculture sector.

The agriculture sector remains the major source of livelihood and is the largest employer in Namibia. The sector plays a key role in contributing to the country's export earnings, particularly through the export of meat and meat products, dates, grapes and other products, amongst others.

The Ministry remains committed to the vision of the accessible agricultural data/information for decision-making and research purposes. The Ministry is grateful for the continued assistance received from all the data sources, ranging from agricultural boards, NPC Secretariat, Namibia Statistics Agency (NSA), farmers and other institutions that availed the statistical data and information for this publication.

Your views and comments in improving this publication are always welcome.

Thus, contact us for your comments and suggestions on the relevance of the information presented and areas where this publication needs improvement to meet your needs.

Carl Schlettwein, MP
MINISTER
June 2021

INTRODUCTION

This edition of the Agricultural Statistics Bulletin is divided into three (3) sections, namely:

1. **The place of Agriculture in the economy** – this section provides an insight of the sector’s contribution to the overall economy.
2. **The contribution of the major sub-sectors to the agricultural output** - this section indicates how each agricultural sub-sector contributed to the total agricultural output.
3. **Commodity production and price details** – this section indicates aggregate production

by sub-sector and the changes in price over time.

Each section contains tables and charts with short summaries. The various tables and graphs contain time series data from the year 2015 through 2019. In this edition, **data for the year 2019 was compared to the year 2015, 2016, 2017 and 2018,** respectively, to monitor changes.

Statistical information pertaining to the production and marketing of horticultural products were captured for the third time in this publication. For the communal sector, partial data on grain and livestock production are available but information on agricultural produce and communal crops is estimated by the National Early Warning (NEW). In addition, prices used are official and many of the commodities in the communal areas were either not sold or bartered at a formal market.

This bulletin was developed in co-operation with various organizations. It should be

noted that efforts have been made to standardize the data and definitions with those used in the National Accounts published by the NSA. This publication also looks at contributions of the major sub-sectors to the agricultural output. Agricultural output measures the value of agricultural products produced in the country. However, calculations of Gross Domestic Product (GDP) data published in the National Accounts exclude raw materials, and goods and services consumed during the production process. This is because GDP is based on total value added in all resident domestic producing units. Information on horticulture could not be obtained at the time of this publication.

Section 1: Place of Agriculture in the Economy

Agricultural activities involve mainly crop farming and livestock production, in Namibia. Agriculture, forestry and fishing represent about 7 percent of Gross Domestic Product (GDP) and about 23 percent of employment.

Livestock farming comprises of **cattle, goat, sheep and pig production**, with the central and southern regions mainly rearing sheep and goats, while the northern regions mainly rear cattle and goats.

The main crops grown include **pearl millet (Mahangu), maize, sorghum, wheat, grapes and dates**.

This section highlights the performance and contribution of the agricultural sector to the Namibian economy in the calendar year 2019.

Table 1.1b above represent the currencies of countries with significant marketing of Namibian agricultural products. The highest world currency exchange rate per Namibian dollar was recorded in March and August. However, January was the least favourable month for exporting agricultural products with the exchange rates per NAD being at their lowest.

Figure 1.2: GDP by Primary and Secondary Sectors at Current Prices – Percentage Contribution

Table 1.2 and 1.3 shows GDP by Activity at Current Prices in Millions (N\$) and percentage contribution respectively. There were no major variations by year as industries contributions remained the same (position) in 2019. The tertiary industry remained the highest (59.3%) followed by the secondary

industry (17.3%). The primary industry remained the lowest (15.9%) contributor to

GDP. Among the primary industry, Mining and quarrying sector was the highest contributor to the GDP (9.3%).

Agriculture and forestry sector (3.8%) was the second highest contributor to the primary industry. During the period under review, **livestock farming sub-sector was the major contributor to GDP under the agriculture sector.**

The Agriculture and forestry sector's contribution to GDP declined in 2019 when compared to 2018 from 4.4 to 3.8 percent.

This sector plays a vital role to the livelihood of Namibians and it can contribute greatly in

the poverty reduction efforts. **There are efforts by the government to operationalize Northern Communal Area (NCA) abattoirs to enable farmers to formally market their livestock.**

Section 2: Contribution of major sub-sectors to agricultural output

This section presents information on agricultural output, which is attained by multiplying the quantity of production by the prices of the commodity.

Output is different from Gross Domestic Product, as **intermediary goods are not included in calculating GDP**. This is an estimate adjusted to the initial general price level of the year. In this section, an agriculture output is either livestock or crop sub-sector.

Table 2.1: Agricultural Output at Current Prices (Millions N\$)

	2015	2016	2017	2018	2019
Total Output	6699.29	6203.90	10153.20	11643.11	9611.95

Source: NSA, National Account, 2020

NB** in table 2.1, we consider the value of all commodities total production. For example, the value of cattle is the monetary value of total number of cattle in Namibia. Furthermore, these are aggregates and they include commodities in both the communal and commercial sector.

Figure 2.1: Composition of Output (Million N\$)

Above, table 2.1 and figure 2.1 shows the value of commodities (crops and livestock) at the current price. **There was a huge decrease**

(33.1 %) in the crop compared to livestock output (7.47 %) between the years 2018 and 2019.

Table 2.2: Percentage Contribution to Total Agricultural Output

	2015	2016	2017	2018	2019
Livestock	61.22	59.79	61.04	60.00	67.25
Cattle	41.57	40.55	46.35	47.07	52.20
Sheep/Goats	11.89	9.81	8.57	6.77	7.69
Pigs	2.38	3.00	2.02	2.19	2.52
Karakul Pelts & Wool	1.68	1.94	1.28	1.23	1.42
Diary (Milk)	2.02	2.34	1.40	1.31	1.70
Other Animal & Animal products	1.68	2.14	1.43	1.42	1.72
Crops	38.78	45.01	35.95	36.30	32.75
Wheat	1.46	1.72	1.04	1.11	1.27
Maize	5.22	5.90	5.99	5.50	5.24
Grapes	8.55	10.69	7.00	7.51	11.05
Own Account	23.18	26.30	21.67	21.95	14.92
Own Construction	0.37	0.41	0.25	0.22	0.27

Table 2.2 shows the percentage contribution of livestock and crops to the total agricultural output, **livestock contributed 67.25 percent, while crops contributed 32.75 percent** of the total agricultural output. Thus, **livestock sub-sector is the pillar of the agricultural sector**. On livestock sub-

sector, **cattle were the main contributor (52.2%)** to total livestock output. **Grapes were the main contributor (11.1%)** to the total crop output. The graphic representation of the contribution of livestock and crops to the total agricultural output is displayed in figure 2.2 below.

Figure 2.2: Composition of Percentage Contribution

Section 3: Livestock, Crops and Horticultural products

This section presents information of the performance of agriculture sub-sectors.

The information includes **production, prices, imports and exports of livestock, crops and horticultural products.**

Table 3.1.1 shows the total counts of livestock in the country. There was a decrease in the number of cattle in both commercial and communal area in 2019 when compared to the 2018 figure. Overall

only pigs and poultry have increased in numbers from year 2018 to 2019 while, other livestock (cattle, sheep, goats and ostriches) have shown a decline in numbers.

Figure 3.1.1: National Livestock Census – Numbers

3.1.2 : LARGE STOCK: CATTLE

Source: Meat Board Namibia, 2020

Table 3.1.2a, shows that the price per kilogram was relatively good to the beef producers and beef industry at large. The lowest carcass mass (214.78 Kg) was recorded during November while, the highest (253.88 Kg) was recorded during April. On average, the 2019 price per Kg of beef was N\$43.13 which is an increase

of about 5.68 percent of the 2018 beef price. Carcass mass (Kg) of slaughtered cattle was relatively kept constant even during dry season at an average of 236.23 Kg, **this is an indication of proper livestock rearing management.**

Table 3.1.2b: Live Cattle Marketed – Number

Source: Meat Board Namibia, 2020

Table 3.1.2b shows the cattle marketed during the year 2015 to 2019. **Focusing on year 2019, a decrease of 9.15 percent on live cattle export to RSA was recorded.** This shows an achievement with regards to the government efforts to reduce the total number of livestock exported on hoof. Moreover, export abattoir (Meatco) factory recorded a huge increase of 73.33 percent in live cattle intake while, local butcheries intake declines with 7.66 percent. Meatco resumed operation

under the NCA with mobile abattoirs since 2017, while by the year 2019 three (3) abattoirs in the NCA were revamped to assist with the formal market of livestock in the NCA. During the period under review, 0.25 percent of live cattle were marketed through from the NCA. Overall, the live cattle marketing for the year 2019 grew by about 4.78 percent as compared to the previous year.

3.1.3 SMALL STOCK (SHEEP AND GOATS)

Table 3.1.3a: Small Stock (Sheep and Goats) Marketed – Number

Source: Meat Board Namibia, 2020

The table above presents the number of sheep and goats marketed locally and regionally; this is further illustrated in the figure below. It is evident that sheep (66.09%) were the most marketed small stock through formal market during the

year under review. **Small stock marketed on hoof to the Republic of South Africa is still dominating the small stock industry.**

During year 2019 the live small stock export amounted to 67.4 percent of the total marketed small stock. About 47

percent of the total marketed goats were exported on hoof to RSA.

Figure 3.1.3a: Small Stock (Sheep and Goats) Marketed

Table 3.1.3b: Export of Live Sheep/Goats to RSA

	2015	2016	2017	2018	2019

Source: Meat Board Namibia, 2020

This table summarises the average monthly mutton prices for the year 2019. During the period under review, average mutton producer price per kg was N\$ 40.13. Both second and third quarter recorded the low price per kg while, the fourth quarter had highest producer price compared to other quarters. Overall,

mutton producer prices were relatively good. It is evident that **only few small stocks marketed** during the period under review **was absorbed domestically** however; this cannot be explained as to why, despite the good mutton producer price.

3.1.4 : PIGS

Table 3.1.4: Pigs – Numbers Marketed and Prices

Source: Meat Board of Namibia and Pig Farm, 2020

Table 3.1.4 shows the number of pigs that were slaughtered, imported (pork) and the average price per kilogram in 2019. Despite the locally produced pigs slaughtered **there was a deficit in the supply which attracted importation of pork** at an average of 285

metric tonnes per month. Pork prices per Kg was relatively stable over the months however, least price was recorded during April (N\$30.34) and May (N\$30.17) while, the highest was recorded in November (N\$36.10).

3.1.5 : KARAKUL

Table 3.1.5: Karakul Pelt Production and Price

Source: Nam Dairy, 2020

Table 3.1.6a above presents milk annual production and average price per litre for year 2019 while, table 3.1.6b presents monthly milk production and average month price per litre. During the period under review, least production was observed during February (1,705,000 litres) while the highest was realised in July (1,950,000 litres). The average

price for milk per litre was relatively stable.

The average milk price per litre in 2019 was N\$6.05, which is a 16.12 percent increase from 2018 average price. Despite this increase, **milk production declined in 2019** by 8.96 percent compared to 2018. Below is the graphical presentation of milk production and price for 2019.

Figure 3.1.6: Milk Production and Prices

(N\$/I)

Source: Agronomic Board of Namibia and Early Warning Unit within MAWLR, 2020

The above table shows that **area planted (commercial and communal) was the least over the past 5 years in 2019**. This is a decline of 45.9 percent compared to 2018. **Communal sector recorded the highest reduction (80.8%) in production, where overall production declined by 32.8 percent. Namibia declared drought in 2019**

and it make sense to attribute the decline in production to poor rainfall. On the other hand, floor price for white maize slightly (0.13%) increased. In order **to meet the white maize national demand, the deficit was filled by imports of 171,031 tons** which was the highest in 5 years. This represents 187 percent imports compared to 2018.

3.2.2: WHEAT

Table 3.2.2: Wheat Area Planted, Production, Imports and Price

	2015	2016	2017	2018	2019

Source: AMTA, Namibia Agronomic Board, 2020

Figure 3.2.2: Wheat Area Planted, Production, Imports and Price

The table 3.2.2 and figure 3.2.2 above shows the area planted, production, imports and prices with respect to wheat. It is evident that **the average wheat price increased over the years**. However, area planted, production, and imports decreased.

About 96 percent of wheat consumed in Namibia was from imports and only 4 percent was produced locally.

This could be a motivation to wheat farmers and those that would want to venture into wheat farming as very few farmers engage into this winter crop

3.2.3 : NATIONAL CEREAL SUPPLY AND DEMAND ('000 TONNES)

Table 3.2.3a: National Cereal Supply and Demand ('000 TONNES) – 2015 to 2019

Table 3.2.4a presents the cereal crops area planted against the corresponding crop production in the Northern Communal Area (NCA). **Poor rainfall resulted in reduced area planted and poor crop production in the NCA.** The area planted for pearl millet

(42.4%) and sorghum, and maize (31.4%) reduced compared to 2018. The production of pearl millet/ sorghum (89%) and maize (81%) reduced significantly.

Table 3.2.4b: Cereal Production in the Northern Communal Areas by Regions in 2019

Region	Millet		Sorghum		Maize	
	Area	Production	Area	Production	Area	Production
	Planted (Ha)	(tonnes)	Planted (Ha)	(tonnes)	Planted (Ha)	(tonnes)
Omusati	47,088	1,062	2,484	9	-	-
Oshana	25,194	462	1,326	6	-	-
Ohangwena	56,508	2,476	6,279	48	-	-
Oshikoto	4,703	3,381	2,475	20	-	-
Kavango East & West	8,204	1,743	896	44	1,570	47
Zambezi	2,414	153	2,422	261	8,759	1,274
Total	144,111	9,277	15,882	388	10,329	1,321

Table 3.2.4b shows the breakdown of cereals (pearl millet, sorghum & maize) in terms of area planted and production in the 7 major crops growing (communal) regions. **The highest production for millet (3381 tonnes) was recorded in Oshikoto** while the least (153 tonnes) was recorded in Zambezi region. The highest production for

Sorghum and Maize production Zambezi (261 and 1,274 tonnes, respectively). Oshana region recording the lowest sorghum production (6 tonnes). Maize is mainly grown in Zambezi, Kavango East and Kavango West regions. Zambezi region recorded the largest area planted (8,759 ha) for maize.

Table 3.2.5: Total Area Planted, Production and Imports for Cereal

	2015	2016	2017	2018	2019
Area Planted (ha)	270,613	284,192	323,716	314,493	179,931
White Maize	30,295	22,350	30,774	34,987	18,927
Wheat	2,077	1,832	1,568	1,537	1,011
Millet & Sorghum	238,241	260,010	291,374	277,969	159,993
Production (tonnes)	68,716	74,975	147,263	159,965	57,733
White Maize	40,332	43,611	79,972	64,906	43,602
Wheat	11,411	10,429	6,863	7,508	4,466
Millet & Sorghum	16,973	20,935	60,428	87,551	9,665
Imports (tonnes)	207,698	231,493	160,268	179,237	288,707
White Maize	120,659	110,229	50,483	59,608	171,031
Wheat	87,039	121,264	104,244	118,698	114,363
Millet	3,332	6,096	5,541	931	3,313
Total Production and Imports (tons)	279,746	312,564	307,531	339,202	346,440
White Maize	160,991	153,840	130,455	124,514	214,633
Wheat	98,450	131,693	111,107	126,206	118,829
Millet & Sorghum	20,305	27,031	65,969	88,482	12,978

The table above summarises the total area planted, production and imports for cereal. During 2019, millet and sorghum occupied 88.92 percent of the total area planted (Ha), while maize and wheat occupied 10.52 and 0.56 percent, respectively. There was major

drop in production (63.9%) of cereal in 2019 compared to 2018. **The total cereal production of 2019 was significantly lower than all production of the years under review.**

Appendix 1: EXPLANATORY NOTES

CROPS

Cereals

Cereal estimates reported in this Bulletin have been collected from the Namibian Agronomic Board (NAB) and the Early Warning Unit (EWU) within the Ministry of Agriculture, Water and Land Reform. The NAB provides estimates for controlled commercial crops (wheat, white maize and pearl millet/mahangu). EW provides “provisional estimates” for communal cereal crops for specific cropping seasons and is only relevant for that season and not for planning purposes. Provisional estimates are preliminary in nature and not always reliable.

Estimates provided by NAB are captured from administrative records and those provided by EWU are calculated based on rapid assessment conducted on the seven northern crop growing regions. The latter is supposed to be replaced by actual estimates as soon as they become available from Annual Agricultural Surveys conducted by the Namibia Statistics Agency (NSA).

For summer crops e.g. white maize, the main planting season is from the third quarter of the year and harvesting takes place in the second quarter of the next year, followed by the second cycle of planting. Thus, for the main production, the cropping season starts during October-November; harvest follows during May-June and marketing continues thereafter. Simultaneously, while marketing the harvest from the main production the second planting begins. Winter crops (wheat) are however planted and harvested within the same calendar year.

Horticultural products

Information on horticultural products are not available at the time of this publication.

AGRICULTURAL OUTPUT

The agricultural Output data were all collected from NSA. Output is calculated as follows:

Output = Q x P where Q is the quantity and P is the price in year 1.

In order to calculate output for the summer crops for instance, estimation should be made on the cost and prices. In order to be consistent with the method used by the Namibia Statistics Agency (NSA) in the estimation of National Accounts, all crops are calculated as though they are planted and harvested in one year.

Prices

All prices are producer prices. Prices most commonly used are average auction prices, abattoir and primary market prices. Current prices are the prices paid for a commodity in the specified year. For the table at “current prices” the output for each commodity is calculated using the price paid for the commodity in each of the years considered, hence changes in output reflects changes in price and quantity.

Missing data

Whenever ‘-’ it indicates missing information.

A ‘0’ indicates that during that year there was no production, imports, exports or trade took place.

Negative Values

Brackets indicates all negative values
